Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over GB 2269822

Best in view of US Pat. No.5319019 Nothnagel.

Best discloses the instantly claimed dispersion except does not disclose the instantly claimed excess of ammonia nor the instantly claimed melt flow rate. See the entire document. It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use the instantly claimed melt flow rate because the polymer of Best would probably need to be within the instantly claimed broad melt flow rate range in order to form a film from a dispersion and to give the small particle size disclosed by Best. It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use the instantly claimed excess of ammonia because Nothnagel shows such excess ammonia to give more stable polyacrylate dispersions for the reasons stated at column 10, line 62 to column 11, line 7 and this stability would have been expected in the dispersion of Best for reasons which the ordinary skilled artisan would understand based on the teachings of Nothnagel, particularly the fact that ammonia is volatile and its removal will lead to polymer which does not have enough salt groups to keep it stably dispersed. This is well understood in the art today.

3. Claims 5-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A. A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claims 5-6 recite the broadly recited dispersion, and the claims also recite the narrower version of the dispersion with the narrowing feature denoted by "preferably".
